

BLUEPRINT-FIRST DEVELOPER FRAMEWORK

A precise, lightweight and developer-first visual identity for GitHub, docs, product UI and a high-conversion web presence.

FINAL SELECTED LOGO: V3

Custom outline wordmark
Fn monogram system

BRAND IDEA

Build from blueprint.

FNLLA should feel like a framework with a plan: clear architecture, clean APIs and visible structure.

AUDIENCE

Laravel / Symfony developers

Experienced builders who care about speed, reliability, conventions and elegant tooling.

PERSONALITY

Precise, technical, confident

No hype. No chaos. The brand should feel engineered, not decorated.

VISUAL LANGUAGE

Outline / blueprint / grid

The logo behaves like a technical drawing: modular, light, scalable and developer-native.

Positioning line

Blueprint-first framework for modern web products.

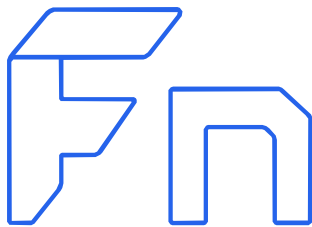

Design clear architecture. Build faster. Scale with confidence.

01 - PRIMARY WORDMARK

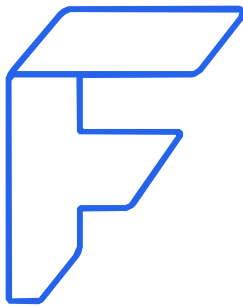

Primary signature for website, docs covers and launch assets.

02 - MONOGRAM

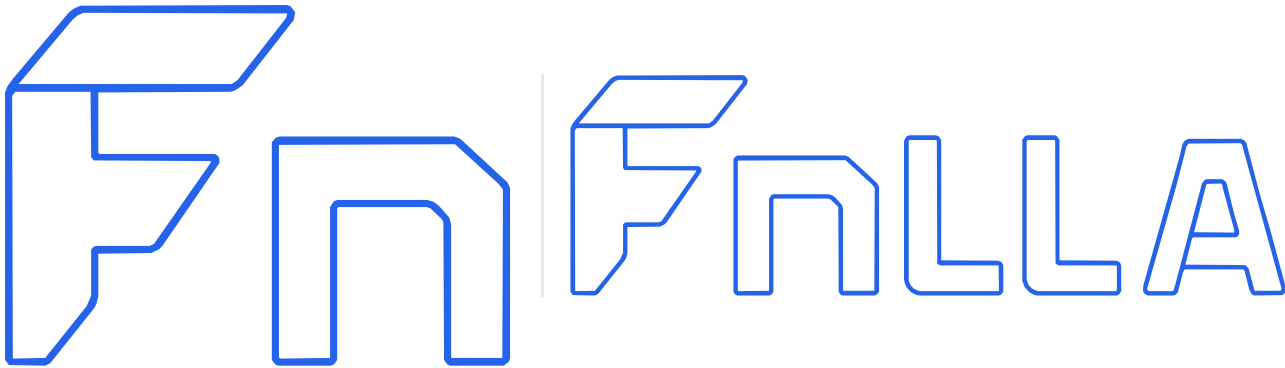

Use for favicons, avatars, package icons and compact navigation.

03 - F SYMBOL

Optional motif for patterns, code blocks and hero illustrations.

04 - RECOMMENDED LOCKUP

Use the recommended lockup when a compact mark plus full name gives better recognition - especially in navbars and GitHub README headers.

Rule: do not substitute the custom outline wordmark with normal typed text.

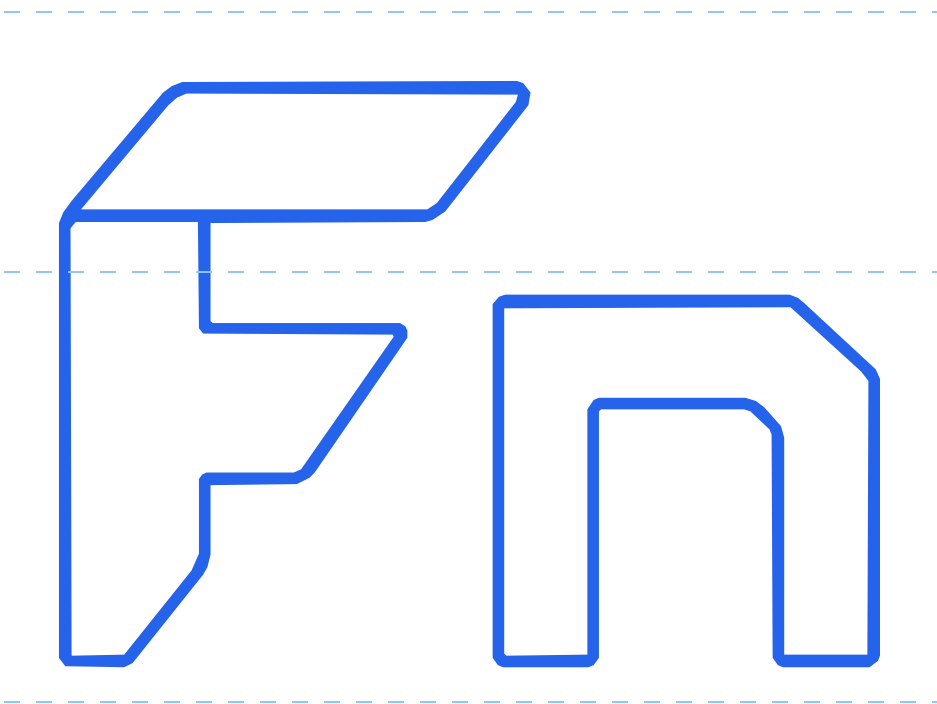

WORDMARK CONSTRUCTION

Baseline and stroke consistency are the foundation.

- 1. F keeps the distinctive angled roof from the selected v3 direction.
- 2. n, L, L and A share the same outline logic and angular cuts.
- 3. The wordmark is custom. It is not a typeface and must not be recreated with text.
- 4. Corners are angular/chamfered; do not round them further.

MONOGRAM PROPORTIONS

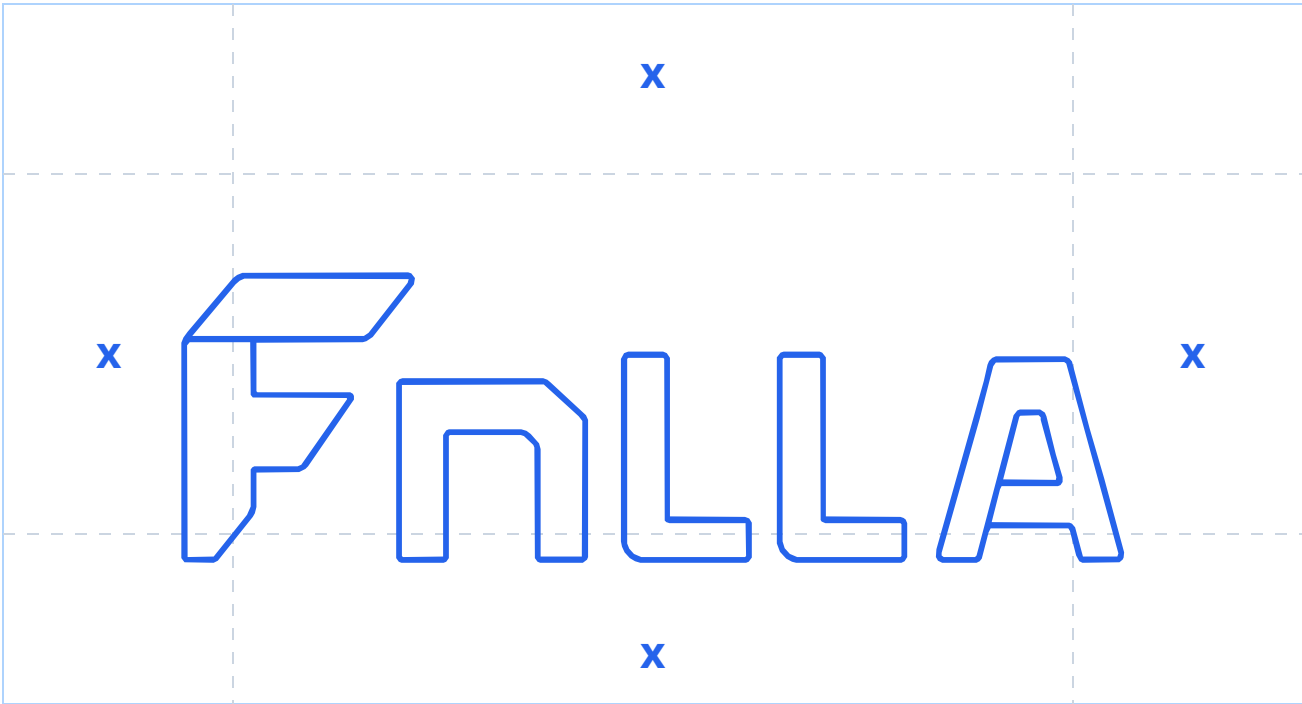

Spacing rule

The gap between F and n is fixed by the final selected v3 artwork. Do not tighten or widen it in independent exports.

LOCKED GEOMETRY

CLEAR SPACE

x = monogram stroke module

Maintain at least one x around the wordmark or monogram. In hero sections and documentation covers, increase clear space to 2x for a more premium feel.

MINIMUM SIZES

Digital

For 16 px favicons, use the dedicated favicon export only.

Print

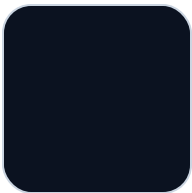

Use larger sizes whenever possible; this identity is designed to feel precise, not tiny.

Blueprint Blue

#2563EB

Primary outline, CTA, links

Deep Navy

#0B1220

Text, headings, high contrast

Blueprint Tint

#EFF6FF

Soft panels and backgrounds

Light Surface

#FAFAFA

Page and UI surfaces

Border

#E5E7EB

Dividers and card borders

White

#FFFFFF

Base background

Light-background rule

The v3 outline identity is optimised for white, off-white and pale blueprint surfaces. Dark-background use should be treated as a separate future variant, not a default.

PRIMARY PRODUCT TYPEFACE

Space Grotesk

Regular / Medium / SemiBold / Bold

Use Space Grotesk for headings, navigation, CTAs, UI labels and longer body text. It supports a modern technical tone without looking too corporate.

Aa Bb Cc 0123

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz

0123456789 !@#\$%^&*()_+={}[]

CODE / TECHNICAL TYPEFACE

JetBrains Mono

```
import { defineBlueprint } from "fnlla";

const app = defineBlueprint({

  api: true,

  auth: "session",

  deploy: "production"

});
```

Use monospace only for code, terminal, technical annotations and developer-facing examples.

HERO DIRECTION

Build from blueprint.

A page for developers should look clean, fast and confident. Use generous white space, crisp borders, blueprint tints and code-first examples.

Get started

View docs

CODE CARD STYLE

\$ fnlla create api

OK blueprint generated

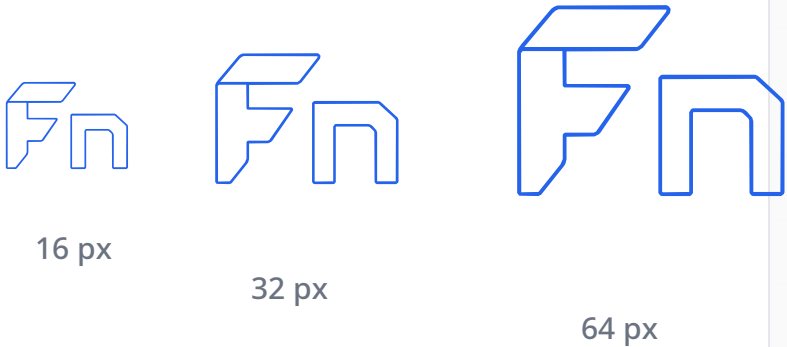

OK routes mounted

OK auth scaffold ready

Ready in 2.1s

FAVICON SYSTEM

APP ICONS

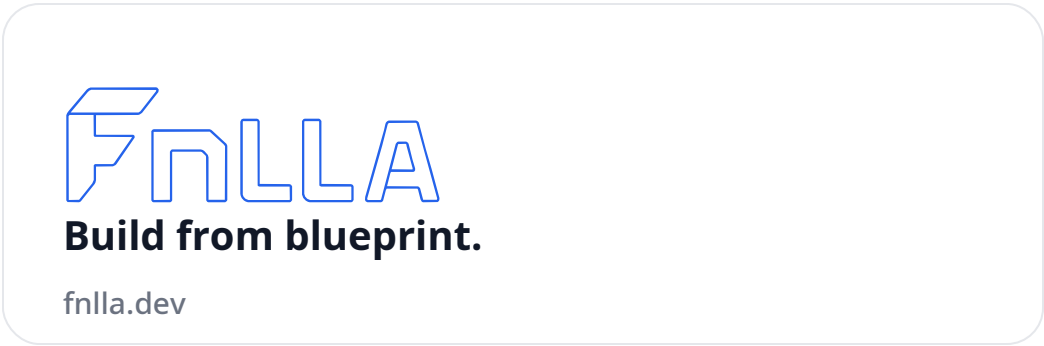

SOCIAL AVATAR

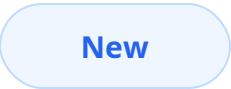

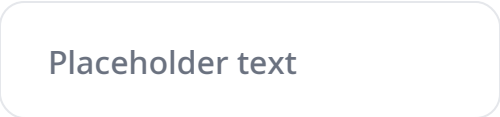

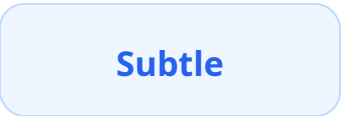

Use monogram only

OPEN GRAPH CARD

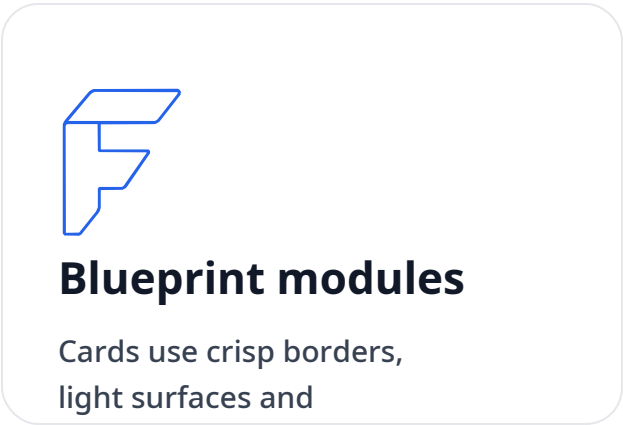

OG imagery should stay minimal: wordmark, one sharp message, generous whitespace and a subtle blueprint grid. Do not overcrowd social assets with screenshots.

BUTTONS

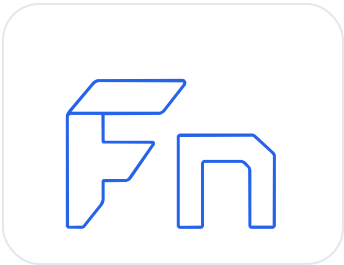

CARDS

DESIGN PRINCIPLES

1. Keep the interface quiet.
2. Use the outline mark as a system motif.
3. One strong blue accent per section.
4. Build on an 8 px spacing system.
5. Let code examples sell the framework.

DO

Use monogram compactly

Use custom wordmark

Use the assets exactly as delivered. Keep generous whitespace and high contrast on light backgrounds.

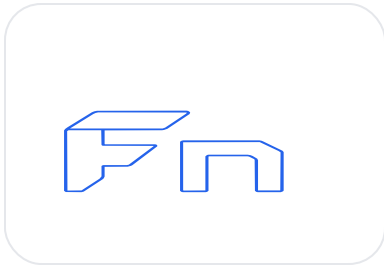

DON'T

Do not fill

Do not rotate

Do not distort

EXPORT RULES

- Use SVG for web UI, docs and scalable interface assets.
- Use PDF for print review and design handoff.
- Use PNG only for favicons, app icons, social images and raster previews.
- Never recreate the custom wordmark from a font.
- Do not change the F-n gap, stroke proportion or the angular n geometry.

OFFICIAL MASTER: V3

[Docs](#) [API](#) [Examples](#) [Pricing](#)

Start

Build clean web products from blueprint.

FNLLA gives developers a structured foundation for applications, APIs and SaaS products - clear conventions, fast flow and production-ready thinking.

Get started

Read docs

fnlla new app

Creating project...

OK routes

OK auth

OK deploy blueprint

GITHUB README HEADER

Blueprint-first framework for modern web products.

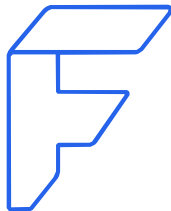

docs

framework

blueprint

README visuals should be minimal and open. One lockup, one positioning line and a few restrained badges.

DOCS VISUAL PATTERN

Routing blueprint

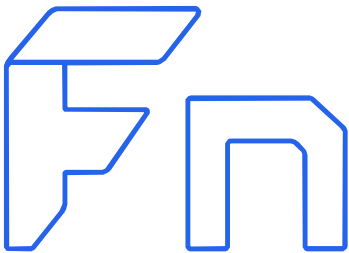

Use the F symbol as a visual anchor for documentation sections and framework concepts.

- 01 Define a module
- 02 Generate the blueprint
- 03 Deploy with confidence

MOTION PRINCIPLE

The logo should feel drawn, not dropped in.

The outline identity is ideal for a line-draw reveal: stroke appears first, then interface cards fade in. Keep it fast, subtle and developer-grade.

1. draw

2. reveal

Build from blueprint.

3. resolve

```
.fnlla-logo path { stroke-dasharray: 1000; animation: draw 900ms ease forwards; }
```

ACCESSIBILITY RULES

- Use Deep Navy for long-form text on white surfaces.
- Use Blueprint Blue for actions, links and logo outline.
- Avoid low-opacity logo use below 20% unless it is purely decorative.
- Provide text labels for icon-only navigation.
- Keep favicon exports crisp and test at 16 px, 32 px and 48 px.

IMPLEMENTATION TOKENS

```
:root {  
  
  --fnlla-blue: #2563EB;  
  
  --fnlla-navy: #0B1220;  
  
  --fnlla-bg: #FAFAFA;  
  
  --fnlla-surface: #FFFFFF;  
  
  --fnlla-radius: 14px;  
  
  --fnlla-grid: 8px;  
  
}
```

HANDOFF CHECKLIST

- [x] Primary custom outline wordmark exported as true SVG.
- [x] Fn monogram exported for icons and compact UI.
- [x] PDF guidebook prepared for GitHub/design handoff.
- [x] Light-background-only usage rules documented.
- [x] CSS, JSON and Tailwind tokens included.
- [x] React logo components included.
- [x] Website art direction and UI examples included.
- [x] No font files are distributed in this package.
